# GENERAL MOTORS DRIVABILITY & CODE DIAGNOSTICS SEMINAR

This all-new General Motors training seminar is here to help you maximize your diagnostic efficiency. You can follow a 4-hour flowchart and fix 80% of the codes and drivability complaints, or you can practice our high level approach to narrow down possible cause lists and sort through what's left in a fraction on the time. The new GM engine management systems become more complex while the system information and diagnostic instructions become more generalized. Our information comes directly from the shops, and not from published repair information. We will show repeatable GM diagnostics based on actual failure patterns and best practices.

Topics include:

- *High level Indicators for all drivability categories*
- *Ignition, fuel & mechanical misfire differentiation*
- *Leveraging MAP & MAF for specific leak diagnosis*
- *Low MAP vs. Atkinson Cycling*
- *New serial data TP sensor signals*
- *The growing cylinder-kill (AFM) misfire problem*
- *Simplified Variable Camshaft Timing (VCT) tests*
- *Position sensor & correlation faults*
- *Feedback low pressure fuel systems*
- *GDI mechanical and electrical failures*
- *Simpler methods for diagnosing leak & performance codes on Purge/Seal and EONV EVAP systems*

ATG strategies have always trimmed diagnostic times. However, given the recent condition of available GM repair information, now they are about the only way to diagnose modern engine management systems in a reasonable time. Come to this seminar to see all of the latest High Level Indicators, complete with real world cases supporting each point.

## Seminar Information

**Date:**

**Time:**

**Instructor:**

**Location:**

**Contact:**

**Cost:**

**Your ATG Sales Rep:**

**at (800) 233-3182 Ext.**

**\$209.00 – Early Bird Special**

**\$249.00 – After**
