SCAN TOOLS: BEYOND THE FLOWCHART

This all-new Scan Tool seminar was built using a completely different approach – to show the best PIDs, controls and other Scan Tool functions to use for each diagnosis. We've reinvented Scan Tool training because button-pushing and menu navigation don't make you more successful. Rather, success comes when you know your Scan Tool so well that you can set the flowchart aside and 'make up' your own diagnostic path. Not only is this path more accurate – it's quite a bit shorter than the flowchart. There are dozens of examples of this strategy in action, diagnosing the most common faults:

- Fuel Trim codes
- EVAP leak and other functional failure codes
- O₂ and Air/Fuel sensor codes
- Misfire code isolation techniques
- EGR functional and flow codes
- Body & Chassis codes
- Scan Tool 'No-Communication' faults

Come to learn these great new techniques for zeroing right in on a root cause.

Right Place, Right Time – Sensor Degradation Example
